Dear Galen,

The RStandard was chosen for this installation because power reliability for the manufacturing facility it is feeding is paramount. Pole aesthetics also played a significant role in the decision making process and the RStandard came out on top there too. Our crews can assemble the poles quickly and we are able to use our existing equipment to set the lightweight, modular FRP poles which would not have been possible with concrete. We look forward to using the RStandard in future projects.

Sincerely,

Larry Vickery
Superintendent Electric and Telecommunications
