HOUMA, LOUISIANA 70361

Patrick,

SLECA has many utility poles in our system that are located in hard to reach locations any many are surrounded by deep vegetation. It was therefore the light weight and modular design of RStandard poles that initially caught our attention as a unique solution to some of our most difficult applications. of course, with our proximity to the Gulf Coast we are also very interested in your poles' capabilities to resist air corrosion as well as the Lifetime Guarantee that these poles will not fail in a hurricane.

In 2009, we bought our first RStandard pole and installed it in a back lot in Houma, LA where is would have been difficult to access with any other pole. The installation was very successful and we are already looking for the next location for us to use another RStandard pole.
